Scope in Diploma in Medical Lab. Technician (DMLT)

Careers in this field are extremely broad, with a number of different training programs available for people who are interested in pathology. It have very good scope in India. One can work in Multi Specialist Hospitals in India. or can open his own Lab. Lab Technician typically work in research and laboratory settings and rarely ever with patients. Lab Technician receive specimens and samples from physicians during surgery or examination and use the many tools of pathology to analyze samples for diagnosis of disease. Lab Technician may spend time teaching Para Medical students, as Lab Technician is a core course of medical training. Best research and lab centers in india are those of RANBAXY, MEDOL, THYROCARE, SRL Diagnostics. Dr. Lal Patho Lab, General Diagnostic and Hy Patho Lab.

Scope in Diploma in Operation Theater Technician/Assistant (DOTT)

If you want to become an Diploma in Operation Theatre Technician/Assistant DOTT courses will be help you! Operation Theatre Technician/Assistant courses are job oriented. In India, different variants of this course are available. Some such well known variants includes Operation Theatre Technician, Operation Theatre Management, Operation Theatre Techniques and Operation Theatre & Anaesthesia Technology. Operation Theatre Technicians are allied healthcare professionals. Their tasks include assisting Doctors in Surgery, arranging surgical instruments before surgery, sterilizing instrumentation before surgery, cleaning surgical instruments after surgery, carrying out Surgeons' commands during surgery and taking care of anaesthesia equipment.

Radiology is a branch of medicine that uses radiation and imaging technology to diagnose and treat disease. It allows the radiologic technologist to produce images of various internal parts of the body to aid in the detection of injury or disease by using radiations. Radiology is central to the clinical practice of medicine across a wide range of disciplines. It is the best practical way to diagnose, monitor treatment and detect progression or relapse of many important and common diseases in a minimally invasive and anatomically precise manner. As a consequence of the increasing sophistication and accuracy of clinical imaging, the utilization and importance of radiology has increased dramatically and consistently over the last 20 years. In recent years, the increasing complexity of radiologic procedures has made Medical Radiology and Imaging technology a highly specialized and sophisticated science requiring competently trained personnel to maintain a high degree of accuracy in radiographic positioning and exposure technique. A qualified Medical Imaging Technologist is skilled in both interventional and Diagnostic Radiology.

Scope of practice Diagnostic Radiographers/technologists possess, utilize and maintain knowledge of radiation protection and safety. Radiographers have an extremely thorough understanding of the structure of the body, how the body can be affected by injury, and causes and effects of disease when taking X-ray images. Their work does include a wide range of different imaging modalities. Radiographers are the primary liaison between patients, radiologist and other members of the support team. They remain sensitive to needs of the patient through good communication, patient assessment, patient monitoring and patient care skills. As members of the health care team, diagnostic radiographer/technologist participate in quality improvement processes and continually assess their professional performance. They engage in continuing education to include their area of practice to enhance patient care, public education, knowledge and technical competence. Diagnostic radiographers use a range of imaging technology:

- ◆ X-ray - Penetrate through the body to examine and view internal structures.
- ◆ Fluoroscopy uses X-rays to obtain real-time moving images of the internal parts of the body.
- ◆ CT (Computed Tomography) provides cross-sectional views / images of the body using computer with the help of X-Rays.
- ◆ MRI (Magnetic Resonance Imaging) - images of the different tissue types within the body using strong magnet and RF waves.
- ◆ Ultrasound - uses high frequency sound waves to produce images of the structure within the body. It is well known for its use in obstetrics and gynecology. Also used to check circulation and examine the heart.
- ◆ Angiography - radiological study which is used to investigate blood vessels.

Scope in Dresser

Medical assistants in Dresser often take medical histories and record vital signs of patients. Medical assistants complete administrative and clinical tasks in the offices of physicians, podiatrists, chiropractors, and other health practitioners. Their duties vary with the location, specialty, and size of the practice. Medical assistants take and record patients' personal information. Medical assistants in Dresser must be able to keep that information confidential and discuss it only with other medical personnel who are involved in treating the patient.

Rules & Regulation

- Students have to abide by the rules & regulations framed by the Sanjeevani Paramedical College
- Application for leave must be submitted.
- 75% Attendance is essential. In case of less percentage of attendance candidate will be not permitted to appear in the final exam of Jharkhand Paramedical Council, Ranchi.
